

We are pleased to invite you to this series of free online webinars on the identification and management of food allergies in your infant patients. Food allergy can be particularly difficult to identify in our young patients and can have severe consequences if left undiagnosed; keeping abreast of the latest guidance poses its own challenges for those of us working in busy clinics. So how can we effectively navigate through all of this information? This comprehensive series consists of 4 presentations, given by expert speakers and covering all aspects of food allergy care – from early diagnosis to active management. Please see attached programme

The speakers will be available after each presentation for a Q&A session where you will have the opportunity to ask your burning questions. Each broadcast will take place twice, at 1pm and at 7pm, so you can join at the time that best fits your schedule and from a location that's convenient for you.

The webinars have also received accreditation for 1 hour of CPD per webinar.

These webinars will cover the key topics of infant allergy management, including:

Diagnosing food allergies and differentiating them from other childhood feeding problems

How optimising allergy management can benefit you, your patients and the wider healthcare service

Managing infant allergies in primary care, and how we as clinicians can positively impact tolerance acquisition.

Wednesday 15 July: The microbiome: Influencing allergy recovery in everyday clinical practice Professor Jon Vanderhoof Division of

Gastroenterology, Hepatology and Nutrition Senior Lecturer of Pediatrics,
Harvard Medical School

Thursday 23 July: Health economics aspects of managing cow's milk allergy
Matt Cressey Founder, Optimed Healthcare

We look forward to welcoming you online. <https://infantfoodallergy.co.uk/>
